

PATRICK LEIMUEL AGANOS

IT SUPPORT / PROGRAMMER

PROFESSIONAL SUMMARY

Resourceful IT Support Specialist with 3+ years of experience delivering reliable technical solutions and maintaining critical infrastructure. Adept at resolving complex hardware, software, and network issues, ensuring minimal downtime and maximum productivity. Skilled in developing internal web-based tools that optimize IT workflows, demonstrating both technical support and programming expertise. Known for proactive problem-solving, clear communication, and cross-functional collaboration.

EDUCATION

 **COLEGIO DE MONTALBAN**
 June 2015 – April 2019
 Kasiglahan Village, San Jose, Rodriguez, Rizal

PROFESSIONAL EXPERIENCE

IT Support / Programmer
Exelpack Corporation |  May 2021 – Present

- Provided Tier 1 & 2 technical support for 30+ users, reducing downtime and improving productivity.
- Maintained and upgraded network infrastructure (routers, switches, servers).
- Managed Windows system deployments and performed regular system updates and patching.
- Led end-user training on cybersecurity and company systems.
- Spearheaded the development of internal web tools that streamlined IT operations.
- Managed IT hardware procurement and vendor communications.
- Migrated and maintained ERP/SAP Systems, ensuring smooth collaboration across departments.

Key Projects & AWS Integrations

ERP/SAP System Migration & Maintenance

Led the end-to-end planning, migration, and ongoing maintenance of the company's ERP/SAP-based systems, ensuring seamless integration across key departments including Purchasing, Sales, Warehouse, Finance, and Production. Collaborated with department heads to align technical functionalities with real-world workflows, increase data reliability, and improve operational decision-making.

Key Responsibilities & Achievements:

-  **System Analysis & Integration:** Assessed legacy systems and department-specific workflows to customize ERP modules that meet operational needs and enhance efficiency.
-  **Data Migration:** Conducted data cleansing, validation, and secure migration of historical records with minimal disruption to business processes.

-  **Cross-Department Collaboration:** Partnered with functional teams to test features, gather feedback, and refine configurations for accuracy in procurement, inventory, and sales transactions.
-  **Continuous Maintenance & Optimization:** Performed regular system audits, managed user roles and access controls, implemented bug fixes, and improved system performance to maintain stability and security.

Managed and supported the following ERP modules:

- **PMMS** – Products and Materials Monitoring System
Tracks material flow from receipt to production and final inventory, supporting just-in-time manufacturing and delivery.
- **CPOSMS** – Customer Purchase Order and Sales Monitoring System
Automates tracking of customer orders, delivery schedules, and invoicing to enhance client satisfaction and sales visibility.
- **PRMS** – Purchase Requisition Monitoring System
Streamlines internal request workflows, integrates approval layers, and ensures purchasing aligns with budgetary constraints.
- **WRMS** – Warehouse Request Monitoring System
Facilitates real-time tracking of internal inventory requests and interdepartmental stock movements.
- **WIMS** – Warehouse Inventory Monitoring System
Provides real-time visibility of inventory levels, item classifications, and automated reorder alerts for optimal stock control.
- **PJOMS** – Purchase and Job Order Monitoring System
Monitors vendor purchase and job orders to ensure timely fulfillment and cost-efficient procurement.
- **PSMS** – Purchases and Supplier Monitoring System
Maintains supplier databases, purchase logs, and performance reviews to improve sourcing decisions and vendor relationships.

 **AWS Infrastructure Deployment & Cloud Hosting**
Implemented and maintained scalable cloud infrastructure on AWS to support internal systems, finance operations, and remote work capabilities.

Key Projects & Responsibilities:

-  **EC2 Instance Deployment:** Provisioned and configured Amazon EC2 (m5.large) instances with Elastic IPs, secure firewall rules, and CloudWatch monitoring for high availability and performance.
-  **Windows Server 2025 Cloud Hosting:** Deployed Windows Server 2025 environments via AWS EC2; enabled secure RDP access, performed OS-level hardening, and integrated with on-premise networks for seamless user experience.
-  **Permissions & Credential Management:** Configured IAM policies, roles, and user credentials to enforce secure access control and system segregation across departments.
-  **QuickBooks Cloud Hosting:** Installed QuickBooks Desktop on cloud-hosted Windows Server; mapped shared drives for multi-user collaboration, improving financial data accessibility and system uptime for the accounting team.

Internal Systems & Web Application Development

As part of my initiative to streamline internal IT processes and reduce manual workloads, I led the development of several custom web applications tailored to the company's operational needs. These systems were built with a focus on improving efficiency, data traceability, and cross-department collaboration while minimizing dependency on external tools or third-party services. By leveraging modern web technologies, I was able to automate critical workflows, enhance user experience, and ensure system reliability.

 **EMMCRMS – Internal Ticketing System**

Role: Full-Stack Developer

Technologies: PHP, JavaScript, CSS, MySQL

- Designed and implemented a web-based internal ticketing system for IT support and service requests.
- The system allows employees from all departments to log hardware/software issues, track request status, and receive real-time updates.
- Built custom admin and technician dashboards for prioritizing, assigning, and resolving tickets efficiently.
- Integrated reporting tools and metrics (e.g., resolution time, volume trends) for IT performance evaluation and capacity planning.
- Resulted in a significant reduction in average ticket resolution time, improved transparency in service handling, and enhanced overall IT response rate.
- Replaced manual tracking (via paper, spreadsheets, or chat apps) with a centralized and accessible solution.

EMMCSign – Digital Signature Platform

Role: Front-End Developer

Technologies: ReactJS, Ant Design, JavaScript

- Developed a responsive and user-friendly web application for managing digital document signing workflows within the organization.
- Enabled employees and department heads to upload, review, and digitally sign documents such as memos, approvals, and internal forms.
- Implemented role-based access controls, audit trails, and email notifications to maintain security and compliance.
- Reduced paper-based approvals and manual routing, significantly cutting down processing times.
- Enhanced interdepartmental collaboration by centralizing document approvals in a single, searchable platform.
- Helped enforce version control and maintained a secure log of all signed documents for future reference and accountability.

TECHNICAL SKILLS

-  **OS & Systems:** Windows OS, basic Linux
-  **Networking:** LAN/WAN, IP Configurations, cabling, router/switch maintenance
-  **Programming & Tools:** PHP, Laravel, JavaScript, ReactJS, Ant Design, CSS
-  **Dev Tools:** Git, remote desktop support, ticketing systems, version control
-  **Hardware:** PC building, printer setup, device troubleshooting
-  **Cloud:** AWS (EC2, S3), Hostinger – server setup and deployment
-  **Security & Maintenance:** Data backup, access control, antivirus configuration

SEMINAR ATTENDED

 **Software Quality Assurance Manual Testing: ISTQB Certification Foundations Training**

 September 9 & 10, 2023 |  via Zoom

- Fundamentals of Testing
- Testing Throughout the Software Development Cycle
- Static Testing
- Test Techniques
- Test Management
- Tool Support for Testing
